Learn pricing, client communication, and project workflows.

Meet the Mentor

Abbaz Uddin

AI Website Development Head,
Growth Scraper

Hi there,

I'm Abbaz Uddin, AI Website Development Head at Growth Scraper and Founder of Imli Strategy, a website and AI systems agency building digital products for real businesses.

With 7+ years in web and digital, I now build using modern AI tools like V0, Replit, Vercel, and Cloudflare to deliver websites that perform.

Teaching is my passion. I've trained 75+ students and I believe anyone with the right system can build a powerful website without writing a single line of code.

From landing pages to full stack web applications, I have delivered websites that load fast, rank on Google, and bring real business results.

This program is built from the same frameworks and tools I use on real client projects, not theory, not outdated methods, just what actually works today.

Why AI Website Building is the Most In-Demand Digital Skill

Every Indian business needs a professional website.

Agencies charge ₹30,000 or more for a basic website

Entry-level web development roles pay ₹4 to 8 LPA.

Freelancers earn ₹30K+ per website project.

You do not need a developer to build a website. [We show you how.](#)

Who Is This Course For?

Freshers

Anyone looking to start a career in the digital and tech space.

Students

Complete the program with real project and a strong portfolio.

Freelancers

Start offering website services and confidently earn your first client.

Business Owners

Build and control your own website without hiring an agency.

Marketers

Expand your skill set and start delivering websites for your clients.

Career Switchers

Switch to website development regardless of your background.
